

# BTKA belt dryer – the most delicate drying process

Thanks to the good disposition of the materials, the air comes into contact with many individual particles over a large area and can therefore absorb a lot of humidity in a short period of time.

The system operates in circulation mode, to which a certain percentage of fresh air is continuously distributed.

We produce belt dryers according to a modular system and customize them to any desired environment.

From our Auenstein site, directly on the A1, we can reach any company within a reasonable time.

#### + Advantages

- Low-temperature drying process
- Low energy consumption
- Residual heat can be easily realized
- Low maintenance costs
- Extremely delicate procedure

#### + Timely repair service

We carry out repair work on site or in our specially equipped department. We implement efficient solutions with conventional mechanical processing machines and modern machinery.

#### + 24/7

We realized 24/7 even before this term became a buzzword. On request, we can plan our assignments on evenings, weekends and holidays.
