

# Flexible trough screw conveyors

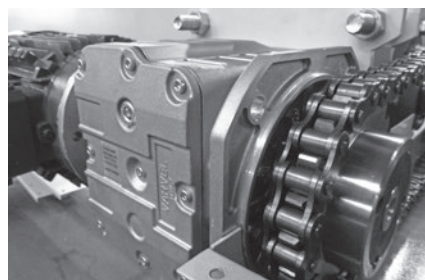

Trough screw conveyors convey the product dust-free and in a straight line over horizontal, upward and vertical distances. They are particularly suitable for granular, small, powdery, semi-wet, fibrous or bridging products such as powder, flour, cement, gravel, sand, slag or abrasive material. The large filling hopper allows a continuous filling.

Even difficult-to-flow materials can easily penetrate the screw. Dust and odor emissions are contained by the closed entrance hopper.

The trough covers can be removed along with their entire length. This makes it easier to inspect and thoroughly clean the entire system.

As a specialized factory constructor, we adapt our product line to your individual requirements and the specific properties of your conveyed products. Our highly efficient team works 7 days a week, 24 hours a day. Our objective is to be operational when you lose as less production time as possible. Thanks to our central location directly on the A1, we are within reach for each plant.

#### ✦ Product features

- Size and inclination can be individually adjusted.
- The large hopper ensures continuous filling.
- The bulk material is conveyed via a rotating spiral.
- Special wing designs transport abrasive, sticky and even clogging material.

#### ✦ Technical specifications

- The systems can be equipped with blades made of stainless steel, wear-resistant sheet metal or hard metal.
- Our tube screw conveyors transport your products dust-free over conveying distances of up to 8 meters.

#### ✦ Expandable

Special designs and options such as stuffing boxes, chain or gear drives, rotation monitoring or flange connections can be supplied at any time.
